

Patient information is complex. Accessing it doesn't have to be.

VitalHub brings a new philosophy to health care information technology: that care team members need information access and communication that isn't complicated, tedious, or expensive. Using VitalHub's suite of applications, clinicians can access and share patient information securely from any location, anytime. VitalHub's user-centered designs allow clinicians to spend more time with their patients and less time on technology. VitalHub provides a cost-effective way for hospitals to deploy a mobile software solution.

With VitalStation, the manually updated unit whiteboard is a thing of the past. Driven by an iPad and easily configurable for any clinical environment, VitalStation provides real-time unit status at-a-glance, always showing the most recent patient information. Since security is of paramount importance in this setting, access control and privacy are constantly maintained. Along with patient updates, team-wide announcements and facility-wide alerts can also be entered and displayed with VitalStation.

VitalHub Station

Key Features

- Affordable electronic whiteboard + mobile solution
- Easily configurable for any department
- Real-time access to patient lists and patients' current locations for clinical rounds and daily care management
- One-touch access to full patient data
- Automatically updated from your Cerner® clinical information systems
- HIPAA compliant

Benefits

- Easy to deploy
- Works with your existing Cerner® solutions
- Access unit information anywhere there is WiFi or wireless service
- Provides a reliable data set for process improvement activities
